EDUCATION

Rutgers University – New Brunswick, NJ
B.S. in Computer Science | Minor in Data Science | May 2026
Relevant Coursework: Artificial Intelligence, Design and Analysis of Algorithms, Data Structures, Software Methodology, Systems Programming, Computer Architecture, Data Management, Machine Learning Principles

EXPERIENCE

Data Engineer I – DOWC *September 2026 – Present*
Parsippany, NJ (Onsite)

- Engineered a metadata-driven Airflow pipeline integrating **66 SQL Server sources** into PostgreSQL using dynamic task mapping, schema discovery, bulk COPY, and transactional refreshes; validated source-to-target row counts **across 3+ runs**.
- Developed and productionized a daily **36-month Tableau-to-PostgreSQL** pipeline processing **~1.8 GB and ~1.65M** rows using Selenium, Airflow, SFTP, and validated staging; eliminated a **1+ hour** manual reporting workflow.
- Engineered fault-tolerant Selenium extraction in Airflow-managed Kubernetes pods, overcoming Tableau export crashes through monthly partitioning, bounded retries, date-filter verification, and CSV integrity checks.
- Leveraged Snowflake's columnar architecture for complex analytical workloads on **multi-million-row** datasets, reducing query runtimes from **20+ minutes** in PostgreSQL to **under 1 minute.**

Data Analytics Intern – DOWC *June 2026 – September 2026*
Parsippany, NJ (Onsite)

- Reverse-engineered **15+ Power BI reports and 100+ DAX measures** for NetSuite accounting integration; translated complex financial logic into SQL and reconciled completed conversions against production Power BI outputs.
- Designed and deployed an **hourly**, idempotent email-to-PostgreSQL pipeline using Power Automate, Azure SFTP, Airflow, and Python; automated irregular Excel extraction, data standardization, and duplicate prevention.
- Audited **4 production Airflow DAGs** and developed a reusable, configuration-driven SFTP-to-PostgreSQL ETL framework, standardizing COPY-based loading, metadata management, file archival, and pipeline structure.

Technical Business Analyst Intern – Marketeq Digital *Sept 2024 – Feb 2025*
Remote

- Bridged engineering and business stakeholders and translated wireframes into user stories and acceptance criteria, enabling modular development and feature rollouts across **3 product teams**
- Mapped data integration flows across Strapi CMS, MongoDB, and Customer.io on Figma to support personalized automated email campaigns for **150+ clients.**

PROJECTS

Formula Vision | formulavision.vercel.app *Dec 2025 – Present*

- Built a **full-stack** Formula 1 race replay and analytics platform using React, TypeScript, Python, and FastF1; architected an interactive historical library spanning **170+ races** with detailed timing, telemetry, and race intelligence.
- Engineered a reproducible data pipeline with typed Parquet, timing-authoritative analytics, and automated validation; published immutable Cloudflare R2 releases with quarantine, atomic catalog promotion, and rollback.
- Replaced FastAPI/WebSocket streaming with static, on-demand delivery; engineered interpolated MAP/CHASE race visualizations with bounded caching, chunk prefetching, and lazy telemetry, eliminating always-on replay compute.

GitHub Review Bot | github.com/pvparekh/github-review-bot *Apr 2026 – May 2026*

- Developed an **autonomous** GitHub App **AI code reviewer** using Python, FastAPI, and Claude that processes pull requests and posts structured inline comments within **~10 seconds** of a push.
- Secured webhook server with HMAC-SHA256 signature verification and RSA JWT authentication; built unified diff parser feeding a **2-pass Claude pipeline** that returns structured JSON per line and a markdown PR summary.
- Containerized and deployed the application using Docker and **AWS EC2**; configured GitHub Actions CI/CD for automated redeployment workflows.

SKILLS

Languages: Python, SQL, JavaScript, TypeScript, Java, R
Data Engineering: Apache Airflow, ETL/ELT, Parquet, Pandas, Selenium, SFTP, Data Validation
Databases: PostgreSQL, SQL Server, Snowflake, Supabase, MongoDB
Backend & Frameworks: FastAPI, Node.js, React, Next.js, REST APIs, WebSockets, Webhooks
Cloud & DevOps: AWS EC2, Cloudflare R2, Docker, Kubernetes, GitHub Actions (CI/CD), Git
Analytics & Automation: Power BI (DAX), Tableau, Power Automate, OpenPyXL
